The Construction and painting work at the Monastery of the Holy Transfiguration in Gapyeong has been completed

From May 14th to 22nd, the monastery’s exterior walls were repaired by filling in gaps, waterproofing, and installing eaves to prevent water flow. The necessary repairing work has resolved a long-standing problem of water leaking through the interior walls and into the basement.

We thank God and all those who assisted in completing this important task just before the rainy season begins.
